GOVERNMENT IS NOT CONVINCED THAT L. N. I. D. RATE REDUCTION JUSTIFIED

**Edmonton, Feb. 19.**—Declaring that as soon as the present session of the legislature is over, the Lethbridge Northern irrigation question will be the most important to engage the attention of the government and will receive careful consideration, joined with a quiet investigation of complaints lodged by several delegations and individual complaints from the district, Premier Brownlee received a delegation representing the newly-formed Lethbridge Northern ratepayers association, **Tuesday morning.**

**Cannot Entertain Reduction**

Until a complete investigation had been made and the government convinced that a reduction of rates was amply justified, he could not entertain for a moment such a proposal, said the premier.

"If it is demonstrated clearly that the rates on the Lethbridge Northern are so high that no farmer can have a comfortable home and reasonable prosperity there as compared with the prosperity enjoyed by farmers in other parts of the province, the rates will be reduced," said the premier. "But until we are satisfied completely that with the introduction of proper irrigation methods such prosperity cannot exist, there will be no reduction of rates."

The government would have to have very clear justification for any move to reduce the capital debt of the project, before they could come to the legislature asking that the ratepayers of the province at large should be saddled with the expense of wiping out this capital debt in whole or in part.

**GRANUM WINS FROM STAVELY**

9-5

Stavely bowed to Granum in an exhibition game played here last Thursday night. The score was 6-5. It was a fast, clean game with a fair crowd in attendance. McKinnon, Ross and Hoffman scored for the home team in the first period; in the second period Anderson, Graham and Damron scored for Stavely, and Ross, Orton and Bailey for Granum; and in the third McKinnon scored on a neat pass from Monkman, Ross again scored; and Damron hit the twice twice for Stavely.

**HAD TO CUT THEM**

Young Bride: "Are these green pens easy to cut?"  
Grocer: "To cut?"  
Bride: "Yes. My husband likes split pea soup, and I promised to make some tonight."

The hardest job your kid faces is that of learning good manners without seeing any.

**IN THE ESTATE OF ROELF POELMAN, LATE OF THE TOWN OF GRANUM IN THE PROVINCE OF ALBERTA, FARMER, DECEASED**

Notice is hereby given that all persons having claims upon the estate of the above named Roelf Poelman, who died on the 17th day of November, A. D. 1928, are required to file with the undersigned solicitor or executor, by the 23rd day of March, A. D. 1929, a full statement duly verified of their claims and of any securities held by them, and that after that date the executor will distribute the assets of the deceased among the parties entitled thereto having regard only to the claims of which notice has been filed or which have been brought to their knowledge.

Dated this 18th day of February, A. D. 1929.

**JOHN L. FAWCETT,**  
Solicitor for Executor,  
Macleod, Alberta.  
**WILLIAM POELMAN,**  
Executor,  
52-21 Gramus, Alberta.

Hatcheries Ltd., Vancouver and Calgary, British Columbia first Commercial Baby Chick Hatchery. Chicks guaranteed from Blood Test. Flock only. Pool or Club orders arranged. Full particulars and prices from R. J. E. Gardiner, Mac-

**CAPITAL GOSSIP AND PROVINCIAL NEWS**

**C. N. R. To Build Alberta Branch Lines**

Of the 655 miles of branch lines construction which is proposed by the Canadian National Railways during the next three years 156 miles are in Alberta. The longest project in the province is 82 miles of new construction to run south-easterly from Alliance to near Dobson on the Calgary-Saskatoon line of the C. N. R. In addition to serving a large area of good agricultural land this branch will considerably shorten the haul for grain and other shipments to Edmonton. From this new line a branch 25 miles in length will be built in a north-easterly direction from Bulwark. The building program in Alberta also includes the extension of the Laverna line from its present terminus at Hemaruka to Seaport on the Hanna-Warden line, a distance of 41 miles following the route originally projected by the Grand Trunk Pacific.

**Home Oil Well Reaches Production**

Alberta's oil production will be materially increased as the result of a strike made during the past week at Home No. 1 Well in the Turner Valley field. The heavy flow of wet gas from the well is being connected with separators and the results of the first few days' test indicate that the production of oil from the Home Well will approximate that from the famous Royalty No. 4.

**Telephone Department Plans Big Expediture**

Expansion of the plant, equipment and activities of the Alberta Government Telephones will involve an expenditure of approximately \$1,000,000 before 1933, it is announced by Hon. V. W. Smith, Minister of Railways and Telephones. Included in the proposed improvements is a new exchange building in Calgary and the construction of new buildings at Hanna, Balcar, Grande Prairie, St. Paul de Metis and possibly one other point in the province. A new building is also planned at Drumheller with a complete automatic exchange and it is expected that automatic equipment will also be installed in the Red Deer building.

**Dr. H. M. Tory Honoured**

Dr. H. M. Tory who occupied the position of president of the University of Alberta from its organization until last year has recently been appointed president of the League of Nations Society of Canada, succeeding Sir George Foster.

**Fairs Association Holds Success-ful Meeting**

V. E. Forster was re-elected as president of the Alberta Fairs Association for the fourth year while Harold Husley of Lloydminster enters on his eighth term as secretary-treasurer following the unanimous decision of the 1929 convention held this week in Calgary.

John Wilson of Innisfail was chosen to succeed Hugh MacIntosh of Macleod as vice-president and the following directors were elected: E. W. Bjorklund, Red Deer; J. F. Anderson, Lethbridge; Mrs. C. M. Mellis, Rimby; W. E. Sutton, Vermilion; Chas. Ball, Sedgewick; E. L. Richardson, Calgary and G. R. Stewart, Lamont. It was decided that the 1930 annual convention of the association will be held in Edmonton.

**FEDERAL ESTIMATES CALL FOR EXPENDITURE OF \$391,507,840**

Ottawa, Feb. 18.—Estimates for the fiscal year 1929-30 were tabled today by the minister of finance. They amount to \$391,507,840, an increase of \$6,355,122 over the total appropriations for the current fiscal year.

The large increases are for agriculture, soldiers' pensions, national defense (for air and naval services), postoffice, trade and commerce and capital expenditures of public works and marine departments. Interest on public debt is estimated at \$121,880,493, a decrease of \$3,642,236, showing the effect of the redemption of funded debt from current revenues.

Other decreases are: Soldier and general land \$270,000; superannuation \$81,000; railways and canals, income \$74,329; mines and geological survey \$6,000; Dominion lands and parks \$202,511; miscellaneouss \$500; \$62; railways and canals capital \$809,714; civil government and salaries and contingencies \$12,664,063, an increase of \$316,706.

The total estimate for agriculture which is apparent throughout the Dominion affords cause for the deepest satisfaction. Never in the history of Canada has there been such industrial and commercial expansion as that which has taken place during the past 12 months.

In the production of agriculture and other basic industries all previous records have been surpassed.

"Besides his daughter, he is survived by two sisters, Mrs. C. E. McIntyre of Vancouver, and Mrs. G. S. Birchell of Brampton, and one brother, R. W. Craig, of Brampton.

A funeral service was held on Wednesday at 10:30 at Mr. Holthiy's residence, after which the remains were taken to Brampton for interment.

**SPEECH FROM THE THRONE**

Ottawa, Feb. 7.—Following is the full text of the speech from the throne read at the opening of parliament today:

Honorable members of the senate: Members of the house of commons:

In opening the third session of the sixteenth parliament of Canada I desire to join with you in profound thankfulness for the recovery of our beloved sovereign, King George the Fifth. I share your fervent hope that his majesty may be completely restored in health and that he may be spared to continue that devoted service to the empire which has won for him an abiding place in the hearts of the people.

The following, from the St. Thomas Times-Journal of February 4th, will be of interest to many Macleod people, referring, as it does to a former resident here:

"John R. Craig passed away at the home of his son-in-law, F. B. Holthiy, "The Oaks," St. Thomas, on Sunday. Mr. Craig was in his 92nd year, the eldest son of the late Robert Craig, of Toronto township. He was born at Lambton Mills in 1837, and was educated at Victoria University. In his early days he was an important importer of purebred stock. He was one of the pioneer ranchers of Southern Alberta, moving there with his family in 1882. His wife was Miss Mary A. Snell, daughter of the late John Snell of Snelgrove. Since his wife's death, Mr. Craig has made his home with his daughter, Mrs. Holthiy, who is the sole surviving member of the family.

"Mr. Craig was a man of strong literary tastes, a great and careful reader of wide range. He was a member of the United church. Besides his daughter, he is survived by two sisters, Mrs. C. E. McIntyre of Vancouver, and Mrs. G. S. Birchell of Brampton, and one brother, R. W. Craig, of Brampton.

A funeral service was held on Wednesday at 10:30 at Mr. Holthiy's residence, after which the remains were taken to Brampton for interment.

**JOHN R. CRAIG, FORMER MACLEOD RESIDENT, DIED AT ST. THOMAS**

The following, from the St. Thomas Times-Journal of February 4th, will be of interest to many Macleod people, referring, as it does to a former resident here:

"John R. Craig passed away at the home of his son-in-law, F. B. Holthiy, "The Oaks," St. Thomas, on Sunday. Mr. Craig was in his 92nd year, the eldest son of the late Robert Craig, of Toronto township. He was born at Lambton Mills in 1837, and was educated at Victoria University. In his early days he was an important importer of purebred stock. He was one of the pioneer ranchers of Southern Alberta, moving there with his family in 1882. His wife was Miss Mary A. Snell, daughter of the late John Snell of Snelgrove. Since his wife's death, Mr. Craig has made his home with his daughter, Mrs. Holthiy, who is the sole surviving member of the family.

"Mr. Craig was a man of strong literary tastes, a great and careful reader of wide range. He was a member of the United church.

"Besides his daughter, he is survived by two sisters, Mrs. C. E. McIntyre of Vancouver, and Mrs. G. S. Birchell of Brampton, and one brother, R. W. Craig, of Brampton.

A funeral service was held on Wednesday at 10:30 at Mr. Holthiy's residence, after which the remains were taken to Brampton for interment.

**ELECT HIGGINS NEW SALVATION ARMY HEAD AS BOOTH DEPOSED**

The following, from the St. Thomas Times-Journal of February 4th, will be of interest to many Macleod people, referring, as it does to a former resident here:

"John R. Craig passed away at the home of his son-in-law, F. B. Holthiy, "The Oaks," St. Thomas, on Sunday. Mr. Craig was in his 92nd year, the eldest son of the late Robert Craig, of Toronto township. He was born at Lambton Mills in 1837, and was educated at Victoria University. In his early days he was an important importer of purebred stock. He was one of the pioneer ranchers of Southern Alberta, moving there with his family in 1882. His wife was Miss Mary A. Snell, daughter of the late John Snell of Snelgrove. Since his wife's death, Mr. Craig has made his home with his daughter, Mrs. Holthiy, who is the sole surviving member of the family.

"Mr. Craig was a man of strong literary tastes, a great and careful reader of wide range. He was a member of the United church.

"Besides his daughter, he is survived by two sisters, Mrs. C. E. McIntyre of Vancouver, and Mrs. G. S. Birchell of Brampton, and one brother, R. W. Craig, of Brampton.

A funeral service was held on Wednesday at 10:30 at Mr. Holthiy's residence, after which the remains were taken to Brampton for interment.

**ANNUAL MEETING OF THE MUNICIPAL DISTRICT OF BRIGHT SHOWS IT AS IN FINANCIALLY SOUND POSITION**

The annual meeting of the municipality of Bright No. 69, passed off very quietly Saturday afternoon in the town hall. There was absolutely no discussion, not a single question was asked by any of the sixteen ratepayers present. Reeve Evans and Secretary Bright were both present to answer questions or give any information regarding the annual report and financial statement, but everyone seemed to be perfectly satisfied with the printed statement.

The report shows a most successful year financially, the bank balances showing an increase of \$230. The amount expended on public works and road improvements showed an increase of \$2500 more than was spent in 1927, the net amount paid for labor alone being \$7875, and \$1353.10 was spent for material, compared with \$655.31 in 1927. The handsome sum of \$230.26 is the balance of the assets over liabilities on December 31, which shows that the district is in a sound financial condition. The report also shows that nearly \$1000 more was collected in arrears of school taxes than in 1927; \$6000 more in municipal taxes, which is a sure criterion that the farmers of the district are in a better position financially.

Elsewhere it was officially stated that he would refuse the new army head custody of army property and money which remains in his charge as trustee. A court order to compel him to give in here was contemplated, it was said.

**American Secession?**

Anonymous denies that the American branch of the army will secede and break away from the English control, failed to quiet rumors that is in prospect. In these rumors, particular attention is paid to the fact that the high council passed by Commissioner Evangeline Booth, sister of the general, in its selection of a new commander-in-chief.

Past duties of General Higgins give him broad preparation for his new post. He was General Booth's chief lieutenant for the last decade. His ardor and sagacity in business affairs brought him promotion quickly. In 1886 he was made colonel and appointed chief secretary in the United States where he served for nine years under Commander Evangeline Booth. He was later foreign assistant secretary and served in the West Indies, China, Korea and the Far East.

**Declared Unfit**

Sunbury-on-Thames, Eng., Feb. 13.—The high council of the Salvation Army today adjudicated General Bramwell Booth unfit for service as general of the army. The vote was 52-5.

It was the second time in four weeks that the high council had voted the general physically unfit to hold his high office, the first time being on January 16, by a vote of 55 to 8.

Although the general thus again lost his case before the council, he still has at least another move left as he has filed proceedings questioning the legality of the 1904 deed poll under which the high council is functioning.

Three speeches in defense of General Bramwell Booth were made at today's resumption of the session of the high council which took up the question of deposing the aged army leader.

Those who spoke in behalf of the general were Wm. A. Jowitt, K. C., who had been refused permission to represent the general's interests at the recent adjudication; J. A. Pollock, the army's chancellor of the exchequer 25 years ago, and Maurice Whitlow, now a newspaper man.

Both Pollard and Whitlow, as former officials of the army, had been called as witnesses in the new adjudication proceedings.

The presence of two lawyers representing the high council at today's session was the ground of objection by the general's representatives who contended that the members of the high council were not defendants but judges and therefore they needed no legal counsel present.

The council sustained this objection, the puck having been cleared off, play quickened noticeably. The visitors especially seemed cheered by the clearer ice, for they managed to count three times during the second period, the locals not responding once.

Webb and Wilson showed up well during this period, but despite many apparently successful attempts the rubber failed to find the Granum goal. At the end of five minutes' play a scrummage occurred in front of the home goal, from which the puck was presently seen to shoot, propelled by the stick of Bayley. Again the locals fought hard, but soon McKinnon was seen to come up to the ice in a long rush and close to the Lethbridge goal, passing rapidly to Bayley, who again had the honor of fooling Yorke for his second tally that period. One minute later McKinnon was again well within the penalty box, from which the puck was presently seen to shoot, propelled by the stick of Bayley. Again the locals fought hard, but soon McKinnon was seen to come up to the ice in a long rush and close to the Lethbridge goal, passing rapidly to Bayley, who again had the honor of fooling Yorke for his second tally that period. One minute later McKinnon was again well within the penalty box, from which the puck was presently seen to shoot, propelled by the stick of Bayley. ## UNUSED BRAIN POWER

In the course of an interview lately, Sir Arthur Keith commented on the relation between the size of the brain and brain power. It is well known, he said, that many men of genius had been possessed of brains below the normal weight, and mentioned Anatole France, and Jeremy Bentham, whose brains were notably undersized. While the size of the head is no true indication of ability, the evidence of evolution proves that the increase in the brain has been accompanied by an increase in ability.

Sir Arthur's studies have led him to the conclusion that men of genius employ only about fifty per cent of their brain capacity, while the rest of us get along with twenty to thirty per cent.

It is encouraging to know that small-brained men have made marks for themselves in the world, and that all the prizes do not automatically, or anatomically, crown the massive heads; the determination of the individual to utilize latent power would seem to be the important factor in the achievement of something out of the ordinary.

We common folk must somehow learn to use a larger proportion of our brain cells, for, some day the

is replaced with a smooth, velvety lawn, leading up to beds of flowers which in turn screen the less beautiful, but very practical, vegetable garden.

## Planning the Garden

A garden plan is essential. It will save time, space, and worry. Now, while the evenings are still long and the ground is frozen under the snow, is the time to make this plan. Where the garden is large, a full year's supply of vegetables can be easily produced and the rows in this case should be wide enough to permit horse cultivation. This will mean that vegetables of ordinary size, such as carrots, beets, lettuce and spinach should be at least thirty inches apart, while the sprawling sorts and taller ones, such as cucumbers, tomatoes, potatoes, and corn should have from three to four feet. On the farm, or in the village garden it will not be necessary to worry about conserving of space by inter or double cropping and narrow rows. When the early crops, such as lettuce, spinach, peas, radish, and the host of other delicacies which are ready in from three weeks to a couple of months after planting, are harvested the best thing to do is to put in a crop of clover or some quick and close growing thing which will keep the weeds down and may be plowed under later for fertilizer. Wherever possible, garden experts advise running the rows north and south so that the sunshine will be more evenly distributed. Melons, squash, cucumbers and other trailing plants are better grown along a fence or on sloping ground so that the fruits will be dry and mature evenly. Tomatoes should be staked. This staking is often considered too much trouble but it will repay labor and other expense many times over, not only in more northerly latitudes where there is risk of an early frost and tomatoes normally only ripen two or three years out of five, but also in the warmest districts of Canada where the staked fruit always ripens first and is, therefore, much more valuable, and it is always cleaner. The vegetable garden may be made

geniuses will discover the trick, and we shall then be left hopelessly in the rear of the procession. A few people profess to understand Einstein's theory of relativity and time-space, but it is claimed to be impossible to explain in language that the ordinary man can comprehend. Where, then, would our poor understanding be if Einstein's brain were working to its full capacity? And again, just when we have painfully arrived at the mental heights from which we can visualize the electron madly whirling in the invisible atom, we are now told that the electron is an intangible thing bound up in some mysterious way with radiation, and quanta, and our bewilderment is enlightened by the explanation that quanta is a particle of energy multiplied by time.

To bridge the chasm between mediocrity and genius, all that is necessary is to harness the energy of the neglected brain cells and turn the power thus generated into creative thought. If mid-Victorians could have been told of the uses to which electricity is put today, they would have laughed at the prediction as a fantastic dream. The next fifty years will see the development of psychology on a scale compared with which our present state is analogous to the mid-Victorians with regard to applied sciences.

## CANADIAN GARDENING SERVICE

The sun is getting higher, the days longer, and soon the snow will disappear. The seed catalogues have been distributed and it is time to plan for the garden work ahead. A beautiful display of flowers and an abundance of crisp tender vegetables are within the reach of all although in too many cases, and particularly where there is plenty of room, as in the small town and on the farm, gardening is often neglected. But there is really no mystery about it and very little work. Moreover, most of this work, even the cultivation, will really be a pleasure or, at all events, good healthy exercise. Only a small outlay of cash is required. A few tools, a little fertilizer, a plan and a couple of dollars worth of seeds will supply the table with flowers to please the eye and vegetables to gladden the palate from early June until November. The old-fashioned back-yard of chips, dust, and weeds

The sun is getting higher, the days longer, and soon the snow will disappear. The seed catalogues have been distributed and it is time to plan for the garden work ahead. A beautiful display of flowers and an abundance of crisp tender vegetables are within the reach of all although in too many cases, and particularly where there is plenty of room, as in the small town and on the farm, gardening is often neglected. But there is really no mystery about it and very little work. Moreover, most of this work, even the cultivation, will really be a pleasure or, at all events, good healthy exercise. Only a small outlay of cash is required. A few tools, a little fertilizer, a plan and a couple of dollars worth of seeds will supply the table with flowers to please the eye and vegetables to gladden the palate from early June until November. The old-fashioned back-yard of chips, dust, and weeds

Upon the skeleton framework of a novel by one of the world's greatest popular authors, Jakob Wassermann, Metro-Goldwyn-Mayer has built a photoplay as modern as the fashions of the year after next. No expense has been spared to produce this picture on a scale that equals any production of the season.

The sets are all ultra-modern in design. The clothes are advanced fashions on winter and next spring.

The director, Victor Seastrom, has handled the megaphone on many of M-G-M's biggest and most successful productions.

**Has All-Star Cast**

Practically every member of the cast has had his name separately featured or starred in electric lights over the marques of every American motion picture theatre.

Theodore Roberts, the grand old man of the movies, was persuaded to come out of retirement to play the role of Gilbert's friend and adviser. His presence alone in a motion picture means that it is worth seeing. Ralph Forbes, who played Gilbert's rival, played the lead in "The Trail of '98" and has a host of admirers all over the country. Alma Rubens, who plays the role of Gilbert's mistress, has been starred in more than a dozen motion pictures. Even Frank Reicher, who plays her husband, was for years a well-known director and has great prestige on the legitimate stage as well.

With these players, Director Victor Seastrom has drawn a powerful and compelling drama laid against the background of present-day Vienna with its exotic surroundings, beautiful women and marvelous scenery.

# A Two-Sided Story

Following is a letter that appeared in a Western newspaper, written by one of its readers. There is information in it for storekeepers: "Your paper is always boasting that home-town buying is the right thing, for if everybody bought away we would not have a town very long. In your editorial a week or two ago you said there would be less buying from catalogues if every merchant would advertise, because it is advertising that keeps the catalogue men going. Well, I believe that's right too, but one thing I would like to see all the local merchants do, and there are more who think the same, and that is for them to print the prices as much as they can in their advertising. And I also think that if the prices are going up they should say so and tell why, if they know. These times we all have to bite our nickles, or most of us, and we certainly don't like the idea of prices going up on staples particularly, and not a word about it till you reach the store. I am not an advertising expert, but I know what I would like to see in my local paper along that line and that is a lot of genuine information about goods and prices every week. Then we should feel better and if we were being fairly treated there would be less sending away. I hear this talked about a lot, so thought I would write you."

**MACLEOD PHOTO SERVICE—  
TYPIFYING IN ITS NEW  
QUARTERS ONE OF THE  
MOST UP-TO-DATE PHOTO  
STUDIOS IN THE PROVINCE  
BOTH AS TO EQUIPMENT AND  
ARTISTIC EXCELLENCE IN  
FINISHED PORTRAITURE—H.  
V. CLARKE, THE PROPRIETOR,  
IS AN AUTHORITY ON MODERN  
PHOTOGRAPHY BOTH AS  
TO THEORY AND IN PRACTICE**

Macleod Photo Service as housed in its new quarters next to the Empress Theatre exemplifies the art of photography carried through its different stages with the latest and most modern equipment in premises built for the purpose, and under the supervision of a master photographer—introducing Mr. H. V. Clarke, the proprietor and moving spirit of this up-to-date enterprise, and considering these fortuitous circumstances it is not surprising that highest excellence in the finished product is attained here in successful practice of an artistic profession.

The art of photography, which was introduced by Dauguerre nearly a century ago, has, within that period developed from a mechanical trade to a scientific art and the photographer of today must be a person of advanced ideas and thorough training to compete with finished photographers. Mr. Clarke has made an intensive study of this interesting profession and has never permitted an opportunity to pass whereby he might improve his technique.

**Equipment and Processes**  
Starting with the camera room, where all portraiture is initiated, the dimensions of the room are 20x30 feet, with large double slant north skylight, the camera used for portrait work is the latest model Eastman, with an F4.5 Wollensack portrait lens. The dressing room leads directly into camera room. After an inspection of the camera room we were shown through the work rooms and laboratories. This

is a revelation to the average person, who is apt to think of a photographer's equipment as a camera, a couple of trays, and a sink. The developing laboratory, or what is sometimes referred to as the dark room, is anything but dark, as it is all finished in white, though the lights used when handling sensitive material is a red—the white walls reflecting this light to such an extent as to make it seem quite bright. In this room are two stoneware tanks of 24 gallons capacity each, and one wooden tank of 50 gallons, the smaller tanks containing the developing and fixing solutions and the larger one water to wash. These tanks are used to develop, fix, and wash roll film. The tank method of developing is used exclusively as the results are more uniform.

Perhaps it would give a better idea of the care necessary and amount of time expended in finishing a roll of film if we go back and start at the front shop momentarily.—Here we are in the front—a customer brings in a roll of film to be finished. Name is ascertained and written on the film. In the summer season there will be on busy days perhaps two or three hundred films and perhaps not more than two or three rolls will belong to the same person. Mrs. Smith will not want to get Mrs. Jones' prints so there is an elaborate system of numbering to identify each order. The film is first entered on the books and a number given to it which is marked in heavy black figures on the roll. When a quantity are entered and numbered they are sent into the developing room.

Here they are stripped of the protective paper, and the number that was written on the roll is now again written on the film proper, and heavy clips placed on each end and hung up on a rack which holds from 6 to 12 rolls of film according to size. When this rack is full it is lowered into the first of the tanks—the developing tank—here it will remain in constant agitation for 15 to 20 minutes depending on the temperature of the developing solution. When fully developed it is transferred to the wash tank to be rinsed for a few moments and is then transferred to the second or fixing tank, where the film is clear and the images on them are fixed permanently. This process takes 15 or 20 minutes, after which the rack is again transferred to the wash tank for a final washing to remove all trace of chemicals, this taking about 30 minutes. When washed the rack is taken out and hung up, the films are removed from the clips and swabbed with damp cotton batting to remove surplus water and prevent drying marks. They are then hung up to dry, which is hastened by means of a powerful fan. After the strip films are dry they are removed from the drying cabinet and sorted according to sizes and taken into the printing room.

This room contains two printing machines for the roll film, and the portrait printer is also here. The roll film may be printed from the strips or singly. In front of the printers are paper cabinets where the sensitive paper is kept. The film is placed on the printer and the grade of paper most suitable to make the best possible print is selected and placed upon the negative. The machines automatically switch on the white light exposing the paper and numbering the sheet at one and the same operation. The print is now ready to be developed, and is passed to the developer who sits beside the operator at the printer, and here the print is developed and transferred to a stop bath to prevent it getting too dark and then transferred into the fixing bath, which makes the print permanent. This bath is partly on one side of a partition, partly on the other, by means of a hole cut through the wall. When the prints are fixed, which takes about 15 minutes, they are taken to the wash-room by the operator and placed in a washing machine. This is a very ingenious piece of apparatus built in the form of a revolving cage inside a metal tank. The cage is started to revolve when the water is turned on by air entering through an intake into cups on the end of the washer and which keep it revolving, which keeps the prints separated, and insures thorough washing of each. Washing takes about 30 minutes, but every batch is tested chemically to make sure, after washing the prints are removed and placed upon metal plates and run through a wringer to remove surplus water and are then placed on a rack to dry, which process is hastened by a powerful fan.

While the prints are being washed the films are taken to the finishing room, cut up and placed in envelopes numbered as originally. The prints are now dry, and go from the dry-

GROCETERIA, LTD., OFFICIALS  
MEET—TWELFTH ANNIVERSARY  
OF THE ORGANIZATION  
CELEBRATED AT BANQUET

Calgary, Feb. 13.—More than 100 employees of Jenkins Groceria, Limited, drawn from the 27 branches of the store both in the city and the country, attended a business convention in the new Elks' building on Wednesday afternoon and evening. The session was presided over by R. Donaldson, while A. C. Messer acted as secretary.

All together the equipment used in this plant to turn out a roll of film represents an investment of about \$2,000, and is being constantly added to as new equipment is brought out, Mr. Clarke believing that all proved innovations in the game must be immediately installed in his studio.

### Enlarging Department

The enlarging department contains one of the very latest pieces of equipment in the market—an auto focus projection printer, and will make enlargements up to 4 diameters in less than the time it used to take to place the paper in the old type camera. The whole series of operations seem very simple, but a trip through this Studio makes it very plain that a high degree of skill is required.

Discussions concerning the company's business, such as advertising, bakery, and welfare, occupied most of the afternoon, addresses being given by H. M. Jenkins, president of the company, Dave Woods, T. Cowan, P. Rinn, J. Harper, J. Friskin and John Ross.

In the evening a banquet was held to celebrate the company's twelfth anniversary. Two hundred guests were present at the dinner, which was followed by several short addresses by officials of the company. H. M. Jenkins traced the history of the store from its beginning in 1905 until 1918, when the present chain of stores was established. During the evening Mrs. M. McEachern presented a beautiful bouquet of roses to Mrs. H. M. Jenkins. Toasts were proposed by R. Donaldson and J. Harper, while an interesting talk on personality was delivered by Emma Reed. Dancing was indulged in after the banquet.

You can't expect much in a land where people think cooking the peculiar vocation of those who can't make a living any other way.

Those Present

Seated at the guest table were:

Mr. and Mrs. H. M. Jenkins, Miss B. Jenkins, Mr. and Mrs. J. Ross, Mr. and Mrs. J. Friskin, Mr. and Mrs. D. McAllister, and Mr. and Mrs. Emma Reed.

Other guests included: R. Donaldson, J. Bennett, C. Jenkins, P. Rinn, A. Wallace, J. Harper, A. McDonald, J. Stephenson, Miss M. Powers, M. Fralick, J. Harvey, D. Wood, R. Pritchard, A. Shearlaw, A. C. Messer, J. Duff, J. Darling.

Country guests were: A. Williamson, C. Fleming, D. Halliday, J. Morley, C. Allison, J. Coates, W. Spencer, H. Wotherspoon, W. Sanders, W. Knox, E. Mack and J. Gibb.

REGULAR MEETING MACLEOD TOWN COUNCIL

The first meeting of the council since election was held Monday night in the Council Chamber. Mayor J. W. McDonald, K. C., presided. The Councillors present were Messrs. Swinton, Day, Hoodless, Stevens and Tweed. The three councillors re-elected, Messrs. Day, Swinton and Stevens, having been sworn in, the regular routine business was taken up and disposed of. The usual monthly grants to the Macleod Public School and the Separate School were passed for payment, also the monthly accounts endorsed by the finance committee were passed for payment.

A. F. Grady made an offer of 25 ft. of lot on the north side of 24th Street, which was referred to the Works and Property Committee. The sale of lot 18 on the south side of 24th street was deferred till next meeting. Lot No. 19 on the south side of 21st street East was sold to Mrs. A. Smith for \$100.00.

## MACLEOD WOMEN'S INSTITUTE ANNUAL MEETING AND ELECTION OF OFFICERS

The Women's Institute of Macleod held their annual meeting for the election of officers for 1929, in the Parish Hall, on Tuesday afternoon. Before the regular business of the meeting was taken up the Rev. G. A. Gunn, of Calgary, representing the Red Cross Society of Canada, presented the claims of the Society to the members of the Institute, asking the help and support of the Institute for the advancement of the work of the Red Cross Society in Macleod. The meeting promised to take the matter into consideration, and if decided to take hold of this work, they will organize a campaign to bring the interests of the Society to the attention of the residents of Macleod.

Mrs. E. Greenwood, the president of the Institute, presided at the meeting. The election of officers were as follows: President, Mrs. E. Greenwood; 1st Vice Pres., Mrs. R. Perry; 2nd Vice Pres., Mrs. H. C. Winter; Sec-Treas., Mrs. O. F. Fansell. These were all re-elected. Directors: Mrs. W. Armer, Mrs. J. A. White, Mrs. H. S. Bailey, Mrs. W. J. Ryan; Librarian, Mrs. Ryan; Chairman of standing committees: Child Welfare and Public Health, Mrs. Griffin; Education and Better Schools, Mrs. R. J. E. Gardner; Legislation, Mrs. E. Whipple; Immigration, Mrs. James Ringland; Household-Economics, Mrs. R. Scott; Agriculture, Mrs. J. A. White; National Events and Canadianization, Mrs. W. J. Ryan; Canadian Products, Mrs. J. B. Sutherland. At the close of the meeting refreshments were served.

## PROTEIN AND MINERAL SUPPLEMENTS FOR PIGS

Feeding tests conducted at the Dominion Experimental Station, Lethbridge, indicate that pigs placed on a ration made up entirely of meal from the cereal grains tend to become unthrifty and, as a result, make slow and comparatively expensive gains as compared with pigs whose rations are properly supplemented. The cereal grains are deficient in both protein and mineral matter. A certain amount of protein for body growth, and mineral matter for bone development must be supplied with the home grown cereals before maximum development of the growing pig can be attained. The addition of skin-milk or buttermilk to a cereal grain ration has been found to be the most satisfactory for supplying the necessary elements for the growth of bone and body but when these dairy by-products are not available, or available in limited quantities only, various combined protein and mineral supplements and mineral mixtures are effective in speeding up gains and cutting down the amount of grain required to produce a hundred pounds of pork.

To obtain data relative to the value of protein and mineral supplements for growing pigs in dry lot, an experiment was conducted at the Lethbridge Station during the spring and summer of 1928. Six lots with ten pigs in each were used in this experiment. All lots

were self fed the same basic ration consisting of oat and barley chaff throughout the 120-day test. In addition, one group received buttermilk, another group tankage, a third group tankage and minerals, a fourth group minerals, a fifth group salt and a sixth group received the meal ration without additions. Buttermilk was fed at the rate of 80 pounds per day, tankage at the rate of 8 per cent of the meal ration and salt mixed with the grain at the rate of 2½ pounds in 100 pounds of grain. The mineral mixture consisting of slack lime 76 pounds, oil slack lime 3 pounds, salt 20 pounds, and sulphur 1 pound, was available at all times to the third and fourth groups from separate compartments of the self feeders.

The results of this test in terms of dollars and cents, valuing oats at 55 cents per bushel and barley at 75 cents per bushel, show that while buttermilk cost 2 cents per gallon it had an actual value of 11 cents per gallon on the basis of grain saved, and tankage costing \$2.50 per hundred pounds had an actual value of \$12.97 per hundred pounds. The mineral mixture costing 36 cents per hundred pounds had an actual value of \$3.01 on the basis of grain saved and salt costing \$1.80 per hundred pounds had an actual value of \$31.72 per hundred pounds. The gains were made not only more economically but also more rapidly. Of the twenty-two pigs that were not up to 150 pounds at the close of the experiment, 9 or 41.9 per cent were from the lot fed no protein or mineral supplement.

In another test with hogs on good bridle pasture the results show the margin of profit in feeding a protein or mineral supplement to be decreased. On the basis of grain saved, valuing feeds and supplements as above, buttermilk had an actual value of 3.2 cents per gallon tankage an actual value of \$2.77 per hundred pounds and minerals an actual value of \$2.89 per hundred pounds.

In another test with hogs on good bridle pasture the results show the margin of profit in feeding a protein or mineral supplement to be decreased. On the basis of grain saved, valuing feeds and supplements as above, buttermilk had an actual value of 3.2 cents per gallon tankage an actual value of \$2.77 per hundred pounds and minerals an actual value of \$2.89 per hundred pounds.
